Abstract

The Golden Law of the competition of expanding Vs. shrinking is implied in the celestial body language of the Moon and the planet Earth. The evolving of the Pacific Ocean shifting from the fast-expanding state to the mini-shrinking state of micro speed in the world map upside down (South Pole up and North Pole down) matches with the waxing and waning in the phase of the Moon exactly. As the master leading role of the planet Earth absolutely, the evolving process of the Pacific Ocean matching with the phase of the Moon may be concluded as following clue,

Birth ➡ fast-expanding ➡ glorious maximum point ➡ mini-shrinking ➡ aging ➡ fade away forever on Earth.

It is just the birth of the Pacific Ocean about 66 Ma ago and its competing with the (ancient) Atlantic Ocean (including the Indian and Arctic Ocean) for the expanding or shrinking state that triggered the full blooming of the residual ancient plates flower nowadays based on the unique super continental bud which symbolizing the golden time and the glorious period in the evolving history of the planet Earth that human being is experiencing. However, the Golden Law of the competition of expanding Vs. shrinking is also performed by human individual from generation to generation of decades, and even the beautiful flowers as well from year to year in mini time scale.

Key words

Celestial body language; Golden Law of expanding Vs. shrinking; the phase of the Moon;
World map upside down; full blooming of ancient plates flower; Pacific Ring of Fire;
unique super continental bud; “comparative celestial bodyology”; Anthropocene.

Introduction

It seems that a convenient channel has been opened to approach the truth of the evolving of the oceans and the ancient plates of the planet Earth based on the world map upside down (South Pole up and North Pole down) with the Northwestern Pacific Ocean lying in the middle. Since the evolving behavior of the Pacific Ocean matches with the waxing and waning of the phase of the Moon in a degree beyond imagination. Although it might be a pity thing that the waxing process (fast-expanding) and the full Moon (glorious maximum point) of the Pacific Ocean had passed away for tens of millions of years and it is in the process of waning (mini-shrinking) by micro step, it had been catalyzed the incredible full blooming of residual ancient plates flower nowadays based on the unique super continental bud about 66 Ma ago.

With the Golden Law of the competition of expanding Vs. shrinking implied in the celestial body language of it, the Moon is more than a natural satellite surrounding the planet Earth from night to night and rising up to a beautiful scene to be cheered by human race. In fact, the Moon is a miraculous mirror reflecting what happened long long ago and what is happening at present and even what would happen in the near and faraway future on Earth, Especially focusing on the birth and fast-expanding shifted to mini-shrinking of the Pacific Ocean in which the largest ancient plate (ancient Jiazhou plate) lies as the central core of the ancient plates group broke up from the unique supercontinent about 66 Ma ago.

Chinese saying that “A stone from another mountain can attack a jade” which mean we could learn more efficiently about the evolving of the planet Earth from its natural satellite—the Moon. Furthermore, even to reveal the evolving mystery of the planet Earth which has been puzzling the geoscience circle all the way for centuries.

Text

1.0 the body language hinted in the world map upside down (South Pole up and North Pole down) with the Northwestern Pacific Ocean in the middle.

In the world map upside down (South Pole up and North Pole down) with the Northwestern Pacific Ocean in the middle, except the ancient Antarctic plate, the outline of the other ancient plates just shows the state of a full blooming flower on the ocean surface. It is shown by Figure 1 as following,

Fig. 1. The state of a full blooming flower hinted by the ancient plates in the world map upside down with the Northwestern Pacific Ocean in the middle.

It is not difficult to find that in the world map upside down with the Northwestern Pacific Ocean in the middle, the ancient Antarctic plate covered with heavy white snow ice just symbolizes the white clouds floating in the sky and the other ancient plates just symbolizes the cutaway view vertically of a full blooming flower. The petals of the ancient plates flower are formed by the ancient American plate and the ancient African and Eurasian plate, and the pistil of the ancient plates flower is formed by the ancient Australian plate.

2.0 the body language hinted by the unique supercontinent 66 Ma ago in the world map upside down.

However, the outline of the unique supercontinent 66 Ma ago jigsaw recovered in the world map upside down just symbolized the flower bud on the surface of ancient Atlantic Ocean waiting for blooming completely sometime in the future. It is shown by Figure 2 as following,

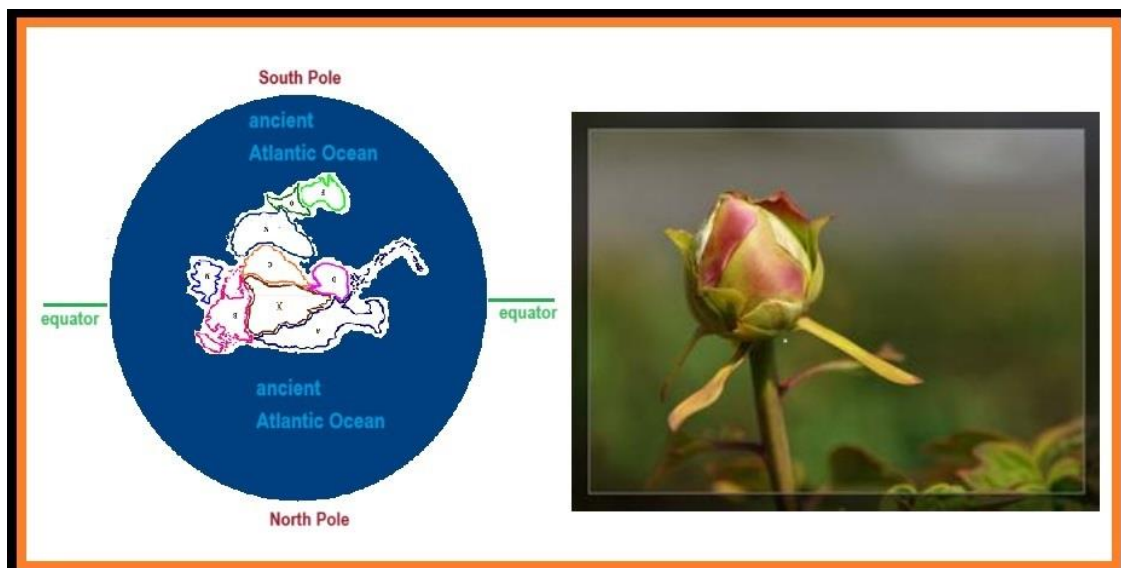

Fig. 2. The flower bud on the surface of ancient Atlantic Ocean hinted by the unique supercontinent 66 Ma ago in the world map upside down.

3.0 the body language hinted in the phase of the Moon.

In the phase of the Moon, it sounds reasonable that the bright part is always focused or emphasized by human being. That is the power of conventional inertia thinking of human race. Whether the waxing or waning process, both of them is just the description of the varying of the brightness in the Moon. So much so that the golden full Moon is often highlighted by some talented people. It is shown by Figure 3 as following,

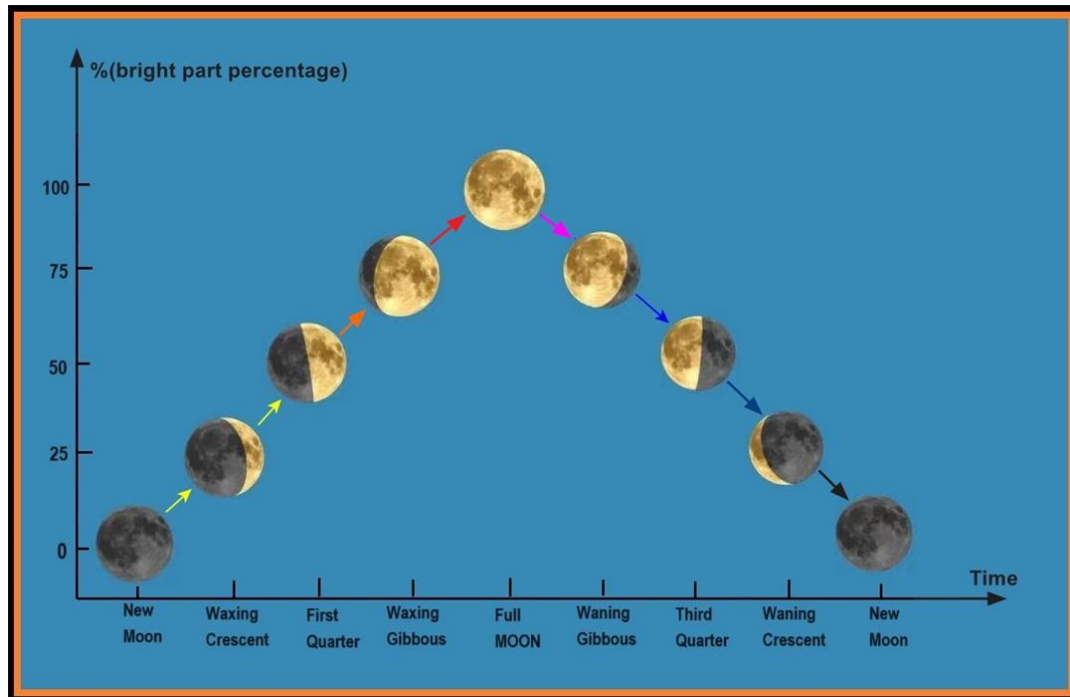

Fig. 3. the body language hinted in the phase of the Moon.

However, due to the constant area of the Moon face locked towards the Earth, the phase of the Moon is actually the competition between the bright part and the shadow part. In other words, during the waxing process, the bright part is expanding gradually and the shadow part is shrinking correspondingly. When the bright part gets to the maximum extreme point of expanding, it would get to the reverse side—shrinking, while the shadow part shifts to expanding. That is the essence of waxing and waning process.

4.0 the phase of the Pacific Ocean matching with that of the Moon and accompanied with the assembling of the full blooming of the ancient plates flower.

In the world map upside down (South Pole up and North Pole down), the red triangle area just shows the largest ancient plate (the ancient Jiazhou plate) sank to the ocean floor about 66 Ma ago at the equatorial area and had been drifting towards higher latitude of the North Hemisphere accompanied with rotating anticlockwise passively until nowadays it is located at the Northwestern Pacific Ocean floor. However, it is magic that the surface of the largest ancient plate was decorated with geological age distribution of clam shell shape by the upwelling of mantle magma around it.

Just like a baby in the baby carriage eager for running on the ground and touching everything and expanding his or her circle of activities. When it was born on the largest ancient plate (red triangle area) in the middle of the unique supercontinent at the equatorial area about 66 Ma ago, the Pacific Ocean triggered the fast-expanding of itself on the surface of planet Earth, and which forced the Ancient Atlantic Ocean to be shrinking correspondingly. About 40 Ma ago, the newborn Pacific Ocean came to its extreme maximum point of fast-expanding and had to turn to the reverse side—mini-shrinking, due to the newborn Atlantic Ocean playing a revenge to recapture the lost territory of the Ancient Atlantic Ocean. Until now, the situation of the evolving of the Pacific Ocean and the Atlantic Ocean is still continuing. The Atlantic Ocean is getting mini larger by micro expanding while the Pacific Ocean is getting mini smaller by micro shrinking of rotating anticlockwise.

Compared to the phase of the Moon, it is not difficult to conclude that the evolving of from fast-expanding shifted to mini-shrinking of the Pacific Ocean from the beginning of 66 Ma ago, just matches the phase of the Moon exactly, or the varying step of the bright part in the Moon. If the 66 Ma is shortened to half of month or so. It is showing by Figure 4 as following,

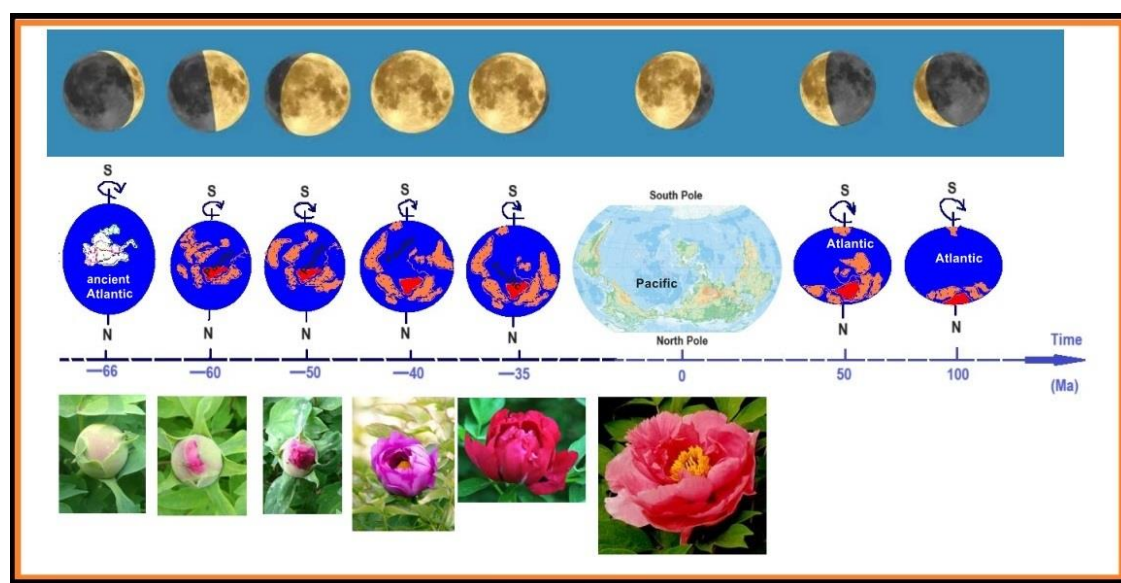

Fig. 4. The phase of the Pacific Ocean matching with that of the Moon and flowers.

What is more miraculous of the planet Earth is that the evolving of the residual ancient plates by reassembling from the beginning of about 66 Ma ago just matches the full blooming process of the flower bud. No doubt, the full blooming of the ancient plates flower nowadays just implies that it is the unique golden time in the evolving history of the planet Earth. Different from the waxing and waning of the flowers each year, the ancient plates flower would exist for single once and its whole process would last for 166 Ma or so.

Also, different from the phase of the Moon happens 12 or 13 times per year, the phase of the

Pacific Ocean would exist for single once on the planet Earth. About 100 Ma in the future, the Pacific Ocean would be shrinking to the largest ancient plate (red triangle area, the ancient Jiazhou plate) located at the North Pole and would be aging her end life there. Just like an old man or woman sitting in a wheelchair which would lead to sharp shrinking of his or her circle of activities.

5.0 the body language competition between the phase of the Pacific Ocean and that of the (ancient) Atlantic Ocean (including the Indian Ocean and the Arctic Ocean).

It is shown by Figure 5 as following,

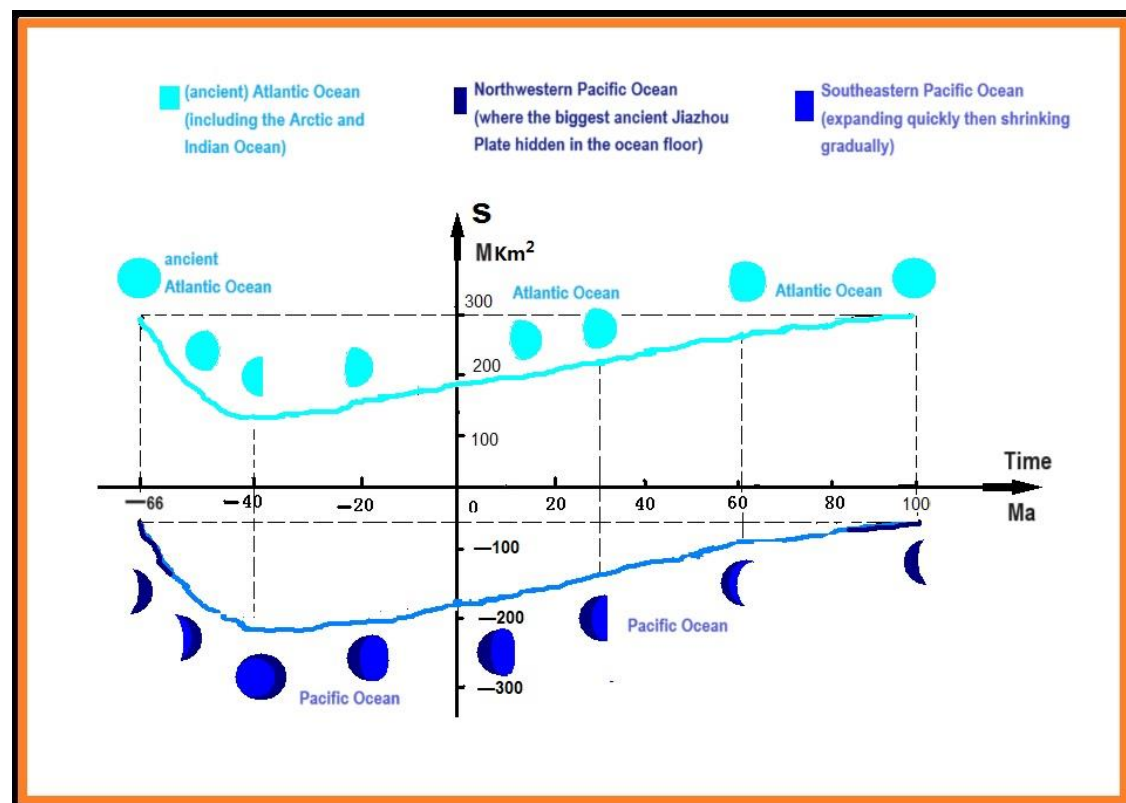

fig. 5. the body language competition between the phase of the Pacific Ocean and that of the (ancient) Atlantic Ocean (including the Indian Ocean and the Arctic Ocean).

The clues may be concluded as following,

- About 66 Ma ago, when the Pacific Ocean was born on the largest ancient plate (ancient Jiazhou plate sank to the ocean floor) located at the equatorial area in the middle of the supercontinent, its area was about 61 million square kilometers which was piled with ice and snow, just like the waxing crescent at 17% of the phase of the Moon. While the Ancient Atlantic Ocean's area was about 300 million square kilometers;
- During the -66 Ma to -40 Ma, the newborn Pacific Ocean initiated the glorious period of fast-expanding in her life. At about 40 Ma ago, the fast-expanding

Pacific Ocean got to the extreme maximum point of its full Moon, where its area was about 210 million square kilometers. Correspondingly, the shrinking Ancient Atlantic Ocean got to the extreme minimum point of waning crescent, and its area was about 160 million square kilometers;

- From the -40 Ma on, the roles of expanding and shrinking between the Pacific Ocean and the (ancient) Atlantic Ocean were exchanged since the newborn Atlantic Ocean superseded the role of the Ancient Atlantic Ocean. That is to say, the Atlantic Ocean initiated her long way of expanding by mini step, while the Pacific Ocean was forced to be shrinking correspondingly accompanied with rotating anticlockwise passively. The situation of expanding and shrinking has been confirmed by the academic of geoscience circle nowadays;
- The situation of expanding and shrinking between the Atlantic Ocean (including the Indian Ocean and Arctic Ocean) and the Pacific Ocean would last until 100 Ma in the future. By then, the Pacific Ocean would be shrinking to the North Pole, where the largest ancient plate (ancient Jiazhou plate)would be located at, and its area would be the same as that it was once born about 66 Ma ago, that is 61 million square kilometers. The state of the Pacific Ocean would be equal to the waning crescent of the phase of the Moon. While the Indian Ocean and Arctic Ocean would mix together with the Atlantic Ocean, and eventually the area of the Atlantic Ocean would be as large as what the Ancient Atlantic Ocean was once 66 Ma ago;
- 100 Ma in the future, the Pacific Ocean would be aging her life on the North Pole and fade away on the planet Earth forever. In other words, the existing of the Pacific Ocean would be like a shooting star in the sky only for single once on Earth, symbolizing the most glorious stage in the evolving history of the planet Earth.

6.0 the ideal model of combined the (ancient) Atlantic Ocean and the Pacific Ocean matching with the phase of the Moon.

It is shown by Figure 6 as following,

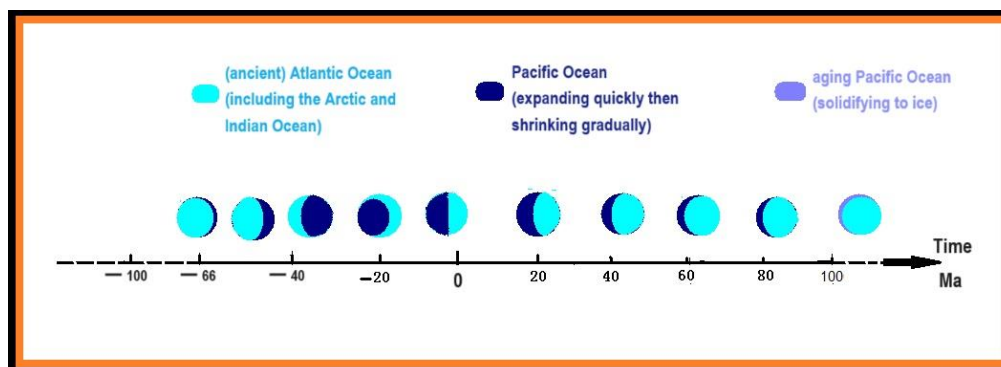

Fig. 6. A special phase of the Moon performed between the (ancient) Atlantic Ocean and the Pacific Ocean.

Obviously, the competition of the (ancient) Atlantic Ocean (including the Indian Ocean and the Arctic Ocean) and the Pacific Ocean is separated by the Pacific Ring of Fire which is formed by the left whirl arm of American ancient plate and the right whirl arm of Asian ancient plate and its extending island chain to the end of New Zealand. If neglect the residual ancient plates and islands on the surface of the Earth, only consider the competition of the (ancient) Atlantic Ocean and the Pacific Ocean, due to the constant area of the Earth's surface from -66 Ma to +100 Ma, that would be a complete evolving of the phase of the Moon.

7.0 the human individual's life matching with the phase of the Moon and blooming of flowers.

It is common sense that the human individual's life may match with the phase of Moon and blooming of flowers. The first half of individual's life would exist as fast-expanding while the afternoon of his life may suffer in the process of shrinking. It is always considered to be the blooming of flower season when an individual of human is in his teenage. That is to say, the enough energy fermented by the individual may trigger the process of fast-expanding and wandering around the world without any hesitation. It is shown by Figure 7 as following,

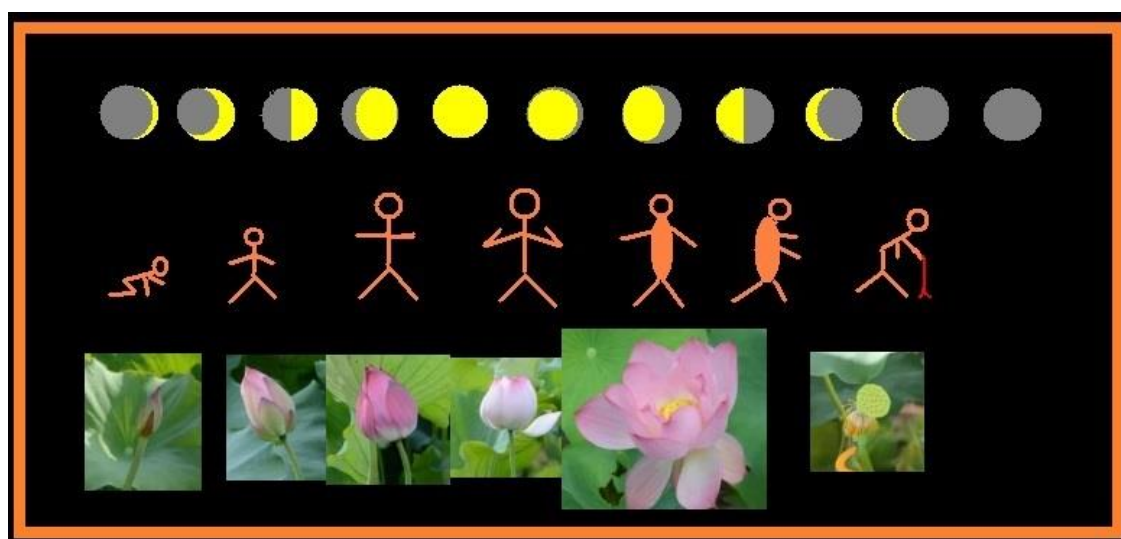

Fig. 7. the human individual's life matching with the phase of the Moon and blooming of flowers.

8.0 the Golden Law of the celestial body language implied in the phase of the Moon.

What implied in the phase of the Moon is the Golden Law of competition of expanding Vs. shrinking. In simple words, things would turn to the reverse side of it once reaching the extreme point of evolving. The phase of the Moon is actually the mirror reflection of what is happening between the evolving of the Atlantic Ocean (including the Indian Ocean and the Arctic Ocean) and the Pacific Ocean.

The hinted feature of the phase of the Moon might be concluded as following,

- It is the logical reminder of how the Pacific Ocean came into being on the planet Earth and what had taken place in the previous 66 Ma;
- It is the synchronized witnesser of what is going on between the Atlantic Ocean and the Pacific Ocean nowadays;
- It is the reasonable foreseer of what would happen on Earth in the future and even where and how the Pacific Ocean would end her life at last, based on the double competing oceans.

Although it may emerge in the sky every night in different proportion of brightness, the Moon is just more than a beautiful scene to be cheered about by human being. Behing the scene is the Golden Law of competition of expanding Vs. shrinking which is performed by the double oceans of the Atlantic and Pacific Ocean as well as the flowers and the human individual's life.

Conclusion

In the world map upside down (South Pole up and North Pole down) with the Northwestern Pacific Ocean in the middle, it is hinted that the full blooming of flower reassembled by the distribution of residual ancient plates is evolved from the unique super continental bud about 66 Ma ago. However, the evolving of the Pacific Ocean from the beginning of 66 Ma ago just matched with the phase of Moon and the brilliant period of full Moon of it has already passed away. The competition of expanding and shrinking between the Atlantic and Pacific Ocean just reveal the Golden Law implied in the phase of Moon which is performed by the flowers and human individual as well.

Discussion

1. What is the profound relationship between the Moon and the planet Earth?

In addition to the natural satellite of the planet Earth, the Moon is actually a mirror reflecting the miniature version of the evolving of the Pacific Ocean in which the largest ancient plate (ancient Jiazhou plate) lies. In other words, if the lifespan of the Pacific Ocean (about 166 Ma) is shortened to one month, it would match with the variation trend of the phase of the Moon exactly; if its lifespan is shortened to 80~100 years, it would match with the rhythm of human individuals beyond imagination; if its lifespan is shortened to several weeks, it would match with the beautiful scene of blooming of flowers marvelously.

2. “Comparative celestial bodyology” would catalyze and shorten the process to reveal the evolving mystery of the planet Earth.

It is a famous western saying that “All roads lead to Rome”. “Comparative celestial

bodyology" would provide a good choice to approach the evolving truth of the Earth through the celestial body language. The waxing and waning process in the phase of the Moon is a natural and reasonable case applied on the planet Earth, especially on the Pacific Ocean, even human individuals and flowers.

3. "Comparative celestial bodyology" would be booming to be applied in the research of geoscience in the future.

Given the live case applied in celestial body language of the intimate relationship between the Moon and the planet Earth, the "comparative celestial bodyology" would act as the waxing crescent in the field of geoscience and get its booming welcome like the full Moon in the future.

4. Would the supercontinent cycle exist as popular expected?

The supercontinent cycle might be only existing ideally in computer forever and would never exist on Earth since the Pacific Ocean is alone and feels lonely in the universe. The life of the Pacific Ocean would be existing single once on Earth just like that of the human individuals.

5. What is the dinosaur family distinguish from the human race?

Undoubtedly, the dinosaur family was the overlord of the super continental bud about 66 Ma ago, while the human race is the crystallization of full blooming of the residual ancient plates flower nowadays. Without the broke up of the supercontinent and sudden extinction of the dinosaur family 66 Ma ago, it would not lead to the full blooming of the residual ancient plates flower nowadays and booming globalization of human being.

6. What is it symbolizing for the Pacific Ring of Fire as well-known?

It is the direct body language of the Northwestern Pacific Ocean forced to be mini-shrinking in the state of rotating passively anticlockwise while drifting towards the high latitude of the North Hemisphere until the North Pole in the rhythm of micro pace as slow as a snail moves.

7. What way should it be more high-efficiency for us to communicate with the celestial bodies in the universe, such as the Moon and the planet Earth and the other members of the solar system, even the whole solar system and the spiral galaxy and the Black Hole?

Like the communication between the human individuals, the body language often dominates the expressing of the true intention of one person. Therefore, how to catch the profound meaning of the celestial body language should be an indispensable choice in researching of all kinds of celestial bodies in the universe, especially the planet Earth on which human race could establish the base camp during the period of Anthropocene solely.
